Large Liquid Fuel Valve

**Applications**
Accurately meters liquid fuel to a gas turbine during acceleration, steady-state operation, and deceleration. May be used for almost any liquid-fueled industrial gas turbine application within its range of fuel flow.

**Standard Features**
Available in different ranges of flow from a low of 68 kg/hr (150 lb/h) to a high of 11 340 kg/h (25 000 lb/h), and has a 30 to 1 range of flow. The fuel bypass valve maintains constant pressure-drop across the metering port. This provides accurate fuel metering regardless of variations in discharge or inlet pressure. An orifice and relief valve eliminates bypass damping when a sudden increase in bypass flow is needed.

**Specifications**

<thead>
<tr>
<th>Supply Characteristics</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel Type</td>
<td>The valve is compatible with most types of diesels, kerosenes, gasolines, heavy and light distillates including naphtha, gas turbine fuels and fuel oils, and other liquid fuels such as biodiesel that are compatible with fluorocarbon (FKM) type elastomers and conform to international standards for utility, marine, and aviation gas turbine service. Ultra low sulfur diesels are also acceptable with proper lubricity additives. Other fuels such as ethanol or methanol may be acceptable with internal seal compound substitutions. Contact Woodward for these and other special fuel applications.</td>
</tr>
<tr>
<td>Fuel Viscosity</td>
<td>Fuel viscosity must be between 0.5 and 12.0 centistokes.</td>
</tr>
<tr>
<td>Fuel Cleanliness</td>
<td>Liquid fuel must be filtered to limit particulate size to 20 µm or smaller. Water content must be limited to 0.1% by volume. Solids, sediment, and particulates must be limited to 1.0 mg per liter of fuel.</td>
</tr>
<tr>
<td>Fuel Specific Gravity</td>
<td>0.77 to 0.91</td>
</tr>

</table>

- Accurately meters flow from 68 to 11 340 kg/h (150 to 25 000 lb/h)
- Handles most liquid fuels
- Accommodates different fuel and schedule requirements
- Requires no on-site adjustments
Fuel Pressure

Inlet Maximum Operating Pressure  9377 kPa (1360 psig) with aluminum body
17 238 kPa (2500 psig) with stainless steel body and class 10.9 (grade 8) bolts

Outlet Maximum Operating Pressure  9032 kPa (1310 psig) with aluminum body
16 893 kPa (2450 psig) with stainless steel body and class 10.9 (grade 8) bolts

Differential Pressure  345 to 827 kPa (50 to 120 psig)

Porting

Overboard Drain  MS33649-4
Inlet and Bypass  MS33786
Outlet  MS33786
Flow Range  30 to 1
Valve Travel  60 degrees
