### Programming

The controls listed above are standard pre-programmed 723PLUS Digital Controls. Woodward and its authorized Distributors can provide custom programming for the 723PLUS/828 Digital Control to meet the need for specialized functions in process, generator plant, engine, and marine applications. The custom version may be a variation of standard control software or totally new. The custom version may be used as a unit control or as a system control for such things as sequencing, load shedding, heat recovery management, and system monitoring and alarming.

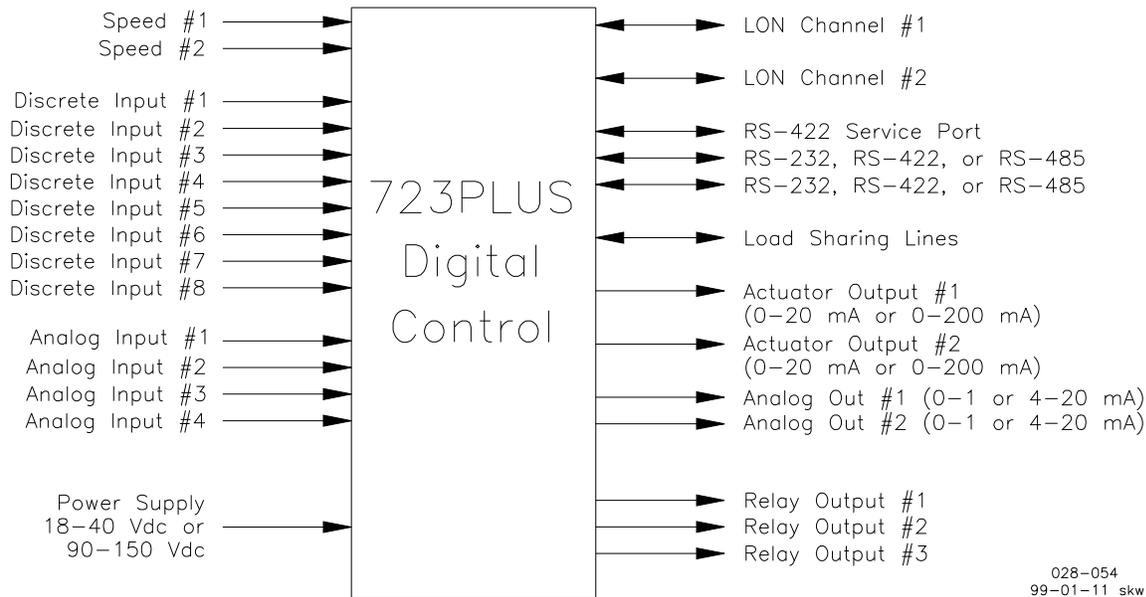

### Adjustments

Adjustments may be made quickly and easily through the Watch Window or Control View PC Interface [not supported on 8280-1042] or an optional hand held programmer. Both adjustment methods are menu-driven and record all set points. More information is on the Industrial Controls section of our website ([www.woodward.com](http://www.woodward.com)).

## Communications

The 723PLUS Digital Control provides two separate serial interfaces for RS-232, RS-422, or RS-485 communications. In some models both ports feature an industry-standard Modbus protocol (ASCII or RTU) that can interface to a Modbus master device such as a Human/Machine Interface (HMI). In other models one port features an industry-standard Modbus protocol (ASCII or RTU), and the other port features Woodward Servlink protocol for a Watch Window or Control View PC interface. Baud rates are tunable to meet specific user requirements.

The 723PLUS control can also communicate using the local operating network (LON) protocol for digital communications. The 723PLUS/828 control I/O ports may be expanded through LinkNet<sup>®</sup> nodes. Typical LinkNet nodes include thermocouple, RTD, analog, and discrete type I/O.

## Self-Diagnostics

The 723PLUS Digital Control has integrated diagnostics to determine the control integrity. Memories, processor, and baseline power supply monitoring are included in the diagnostic tests.
